MASSAGE AND THERAPY TABLES S

SIMPLICITY on one hand and **RICHNESS** on the other are the two distinguishable features of the renewed S-line design.

Upgraded functionality and continuation of the awarded design make massage and therapy tables the **perfect support** for different **massages, physiotherapy treatments and therapies**. The new features simplify the use and make tables even more **comfortable** for both patients and practitioners.

Head section

- standard breathing hole with a plug
- welded and taped seams around the breathing hole preventing the penetration of massage oils and lotions
- practitioner's unhindered access with three-part head section
- a one-handed push down or up adjusts both armrests at once
- breathing hole with memory foam

Upholstery

- soft 8 cm thick padding with a two-layer foam for maximum patient comfort
- welded and taped stitch around the breathing hole
- wider lying surface due to the padding finished at a right angle

Hand switch includes CPR button for fully extended position and SOS button for Trendelenburg position.

Stronger control unit

- new software enables synchronous movement of table's middle two sections
- easier to replace in case of failure

Soft retractable system

Retractable castors include a shock absorber to soften the release of castors.

Table base

- ABS plastic cover is screwless for easier cleaning
- standard 250 kg weight capacity

Circular switch

- simple up & down operation from all sides of the table
- height adjustment range between 48 and 96 cm

So the cleaning becomes easier

To ensure **simple cleaning** and **HIGH HYGIENE STANDARDS**, the upholstery is made of **high-quality imitation leather**. The only **SEAM** around the breathing hole is **WELDED** and **TAPED** to prevent penetration of any **liquids, massage lotions** and **oils** in particular. The **ABS plastic cover** that protects the table base is **screwless** and thus completely **smooth**.

The head and leg section **adjustment levers** with a mechanism integrated in the frame are **easier to press** and due to black plastic **easier to clean**.

To maximize the comfort and ease the use

To maximize the patient comfort, the **8 cm thick padding** is made of **two-layer foam**. It is **DURABLE AND COMFORTABLE** along the **whole lying surface** which is now even wider due to the **padding finished at a right angle**. The **BREATHING HOLE** with **memory foam** on the edges ensures perfect comfort in prone position. A **matching plug** is standard too. Optionally, tables can include a **THREE-PART HEAD SECTION**. With the new mechanism for armrest adjustment, only a **push by one hand** is enough to lower or raise both armrests at once. As it is integrated in the frame, it allows **practitioners an unhindered access** when they treat patients seated at the head section.

Lowering and **raising** massage and therapy tables by the new **CIRCULAR SWITCH** is as simple as it can be. From any side of the table, one can adjust height by **pressing** the switch **down** or **pushing it up** completely effortless. The height **adjustment range** is between **48** and **96** cm.

The standard **WEIGHT CAPACITY** has been increased to **250 kg**, which contributes to the **PERFECT STABILITY**. Practitioners can rely on the table even if they apply strong pressure during treatments. Due to the new software that enables **SYNCHRONOUS MOVEMENT** of the middle two lying sections, they can **position** their **patients easier** and **quicker**. The **hand switch** includes two buttons for the **prestored** completely **flat** and **Trendelenburg positions** and a **memory function** to store a position of practitioner's choice. The table stands firmly on its **rubber feet**. To move the table across the room, it features **RETRACTABLE CASTORS**. Due to the **shock absorber**, the releasing and lifting of the castors is softened.

For various treatments, massages and therapies

The **breathing hole** with a **matching plug** and **ELECTRIC HEIGHT ADJUSTMENT** are now the **standard equipment** of the renewed S-line massage and therapy tables. Two massage table models offer a **wide** and **COMFORTABLE LYING SURFACE** to perform massages and therapies. If treatments demand positions with negative section incline to allow the **Jackknife** or **Trendelenburg position**, 3-, 4- and 8-section therapy table models are available. The **fully equipped** Therapy table S8 standardly includes a **three-part head section** and **sturdier foldable side wings** integrated in the back section. Bobath table offers an extra **WIDE SURFACE** for rehabilitation treatments. Now both, one and two-section model, include a **HAND SWITCH** to adjust the height and with a two-section Bobath the head section as well.
